

## **Flare Solutions E&P Catalog™ and ProCOM Software**

GDF Suez is the worlds fourth largest Energy Company. It is active across the entire energy value chain, in electricity and natural gas, upstream to downstream. It develops its businesses (energy, energy services and environment) around a growth model to take up the challenges of responding to energy needs, ensuring the security of supply, climate change and maximizing the use of resources. The Group employs 196,500 people worldwide and achieved revenues of €74,3 billion in 2007.

Flare Solutions has supplied the latest web based information management software to its UK subsidiary Gaz De France UK for the past 4 years.

Flare's ProCom software is used for production monitoring and reporting and the Anglia Gas Field, an unmanned platform in the Southern North Sea, tied back via a 24km pipeline to the ConocoPhillips operated LOGGS facility, 90km offshore. Graphical dashboards allow early problem identification and intervention using 15minute well production data. In addition back-allocated production can be calculated by the software and electronic reports sent automatically to the BERR, the UK Regulator.

Flare's E&P Catalog software is used as a single point to search through information held in a number of multiple repositories both on and offsite. The ordering and request module makes it easy for staff to find and retrieve what they need. Halliburton host Flare's E&P Catalog product as part of an end-to-end information management service provision. In 2008 the contract was renewed for a further 3 years.

## About Flare

Flare Solutions Limited provides information management consulting, software solutions and related services to the international oil and gas exploration and production industry.

Formed in 1998 by people with a background in geoscience and petroleum engineering Flare brings extensive industry experience gained at management, operations and technical levels within oil companies and the E&P service sector. The Flare team has developed a unique, holistic approach to managing knowledge, information and data that focuses on real business needs, not technology solutions.

Flare has built and deployed a portfolio of software applications for the E&P industry. These include the award winning *E&P Catalog*™ for publishing and finding information, *EPCat-Wave*™ for tracking information, *TOPAS* for personnel competency tracking and *RAPOR* for production and operations management.

Since its formation Flare has worked on a broad range of projects with E&P companies around the world and has gained an enviable reputation for excellence and innovation. Engagements range from information management strategy development to information, workflow and process improvement projects for organizations ranging from small independents to large multinational oil companies as well as governments, services organizations and industry groups.
